

BF63000

HIGH EFFICIENCY
TOUGH PROTECTION

HIGH EFFICIENCY TOUGH PROTECTION **BF63000**

HIGHLY ENGINEERED **LAYERED MEDIA**

The BF63000, with highly engineered layered media, is designed to trap and hold more contaminants to protect high-pressure fuel systems.

The layered media provides the assurance that fuel entering your system will be free of contaminants, including those down to 4 microns.

Stricter emission regulations have forced engine manufacturers to design cleaner, more efficient engines. These new engine systems require higher fuel pressures and tighter tolerances.

Microscopic particles in the fuel, under high pressure, can cause abrasive wear, severely damaging fuel injection system components.

Baldwin Filters' BF63000 high efficiency fuel filter, helps prevent premature injector wear and costly downtime by keeping fuel clean and high-precision fuel systems operating at maximum efficiency.

CLEANER FUEL EQUALS **LONGER ENGINE LIFE**

The Baldwin BF63000 fuel filter removes harmful particles to ensure clean fuel flows to sensitive fuel system components.

- **Quality filtration that meets OE performance**
- **Outstanding efficiency at removing critical, microscopic contaminants down to 4 microns**
- **Contaminant-holding capacity to match the toughest jobs**

Contaminant Holding Layer
Holds over 25% more dirt

Efficiency Layer
Keeps fuel clean to prevent injector wear

ADDED DESIGN FEATURES FOR **EASY INSTALLATION AND REMOVAL**

You've got work to get done. Your time is important. With tighter engine configurations, servicing your equipment can be difficult. You need a filter that works with you, not against you. The design of the Baldwin BF63000 makes installation, removal and disposal easier.

A CLEANER FILTER WITH **ENGINEERED PLASTIC COMPONENTS**

The engineered plastic of the BF63000 is compatible with diesel fuels and can withstand extreme temperature, pressure and vibration changes, while maintaining structural integrity. The durable construction of the BF63000 ensures clean fuel is delivered to your fuel system, protecting sensitive fuel system components.

ADVANTAGE OF PLASTIC COMPONENTS OVER METAL

- **Reduces damage caused from denting**
Providing durable protection in a light weight design
- **Prevents corrosion when exposed to fluids**
Allowing clean fuel to flow to the fuel system without
damaging rust particles
- **Eliminates shavings from metal components**
Protecting sensitive fuel pumps and injector tips
- **Gives more options for disposal**
Providing easier break down for recycling

HIGH STANDARDS FOR CLEANER FUEL

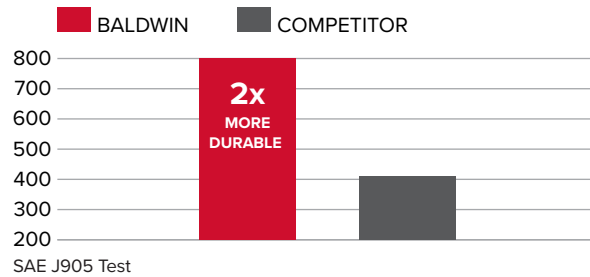

Precise industry standard ISO testing shows the BF63000 delivers quality fuel filtration that meets strict OE performance requirements.

The BF63000 delivers outstanding contaminant-holding capacity, while removing damaging particles down to 4 microns. Hydrostatic burst testing also shows the durable design and construction of the BF63000 withstands pressures up to 800 psi.

BF63000 - DESIGNED AND TESTED TO:

- Meet or exceed tough OE level protection
- Ensure high performance and longer fuel system life
- Help prevent expensive repairs and costly downtime

APPLICATION

BF63000 Fits a wide selection of on-highway truck applications with Cummins ISB 5.9L/6.7L, ISL 9, ISX, QSB 4.5L/6.7L, Paccar PX-6, PX-7, PX-9 Engines
