

New Turbine “V” Series Service Filters

2020V/2040V fuel filter/water separator service filters for new Racor Turbine Series FV and VMA assemblies.

The New “V” Turbine series service filter cartridge elements are designed for the new 900FV, 1000FV, 900VMA, and 1000VMA Turbine series filter assemblies, which are due for release in late 2021. The service elements are backward compatible with previous models of the Racor Turbine Series (FH and FG designs).

Note: Current European and USA service filter element part numbers will not fit into the new FV and VMA housings. New V part numbers are backwards compatible with previous models; current designs will be discontinued in favor of the single “V” design.

Features and Benefits

- New Patented Key feature designed to open the no filter no flow valves in new FV series assemblies, whilst still working on previous assemblies.
- Toolless, easy grip design for quick and convenient service filter removal. Includes lid gasket and t-handle O-ring.
- Aquabloc® media is designed for the best filtration to meet today's fuel challenges.
- Manufactured in the USA and EMEA.

Part Numbers

Current European #	Current USA #	New Global Part #	Release Date
2020SM-OR	2020N-02	2020V2	August 2021
2020TM-OR	2020N-10	2020V10	
2020PM-OR	2020N-30	2020V30	
2040SM-OR	2040N-02	2040V2	
2040TM-OR	2040N-10	2040V10	
2040PM-OR	2040N-30	2040V30	

End cap Changes

- Move to Black end caps
- New Part numbers
- Enhanced Branding
- New Patented Interface
- Backwards compatible with older models
