Clean Air
Air Filter Product Range

Clean air. We can't see it, smell it, taste it or feel it, yet it is a vital part of our everyday lives: ensuring the efficient generation of energy; protecting valuable equipment and artifacts; making indoor environments more comfortable; even preserving life itself.

At MANN+HUMMEL, our entire business is about creating clean air, and our sole aim is to do so in the most efficient way, at the most cost effective price, and with minimal impact on the world around us.

From humble coarse dust filters through to the latest laminar flow operating theatre ceilings, each product in our range is developed around our customers' exact needs using all the application know – how you could wish for.

QUALITY YOU CAN DEPEND UPON

The Eurovent Certification scheme is designed to give you the confidence that the filter you select performs as you expect.

Eurovent Certification is an independently operated scheme for the air filtration industry. Companies applying to join must offer their ePM10, ePM2.5 and ePM1 filters (according to ISO 16890) for testing through Eurovent, an impartial and neutral trade association. The filters are randomly selected by Eurovent and their performance is verified according to the manufacturer's claims. Only those manufacturers meeting their claims are awarded certification.

You can now be sure that what we say has been checked by an independent body.

Eurovent certified manufacturers can be trusted.

EUROVENT CERTIFIED PERFORMANCE
www.eurovent-certification.com

MANN+HUMMEL participates in the ECC program for Air Filters.

Check ongoing validity of certificate:

The filtration experts MANN+HUMMEL

TWENTY FOUR.

It is the number of hours in a day. But it is also the number of filters that MANN+HUMMEL produces every, single second. And that is part of what makes us a world leader in filtration.

But it is our commitment to quality and innovation too. Of the 20,000 people we employ worldwide, over 1,000 work in our R&D department. That means we are at the front when it comes to finding new ways to improve air quality or deliver it more efficiently – which can be seen in the more than 3,000 patents that we have registered.

And when it comes to delivering excellent service, we are always close at hand, with more than 80 locations across the world.

MANN+HUMMEL has been a filtration specialist for more than 75 years. Leadership in Filtration is what drives us.

A FILTRATION CHAMPION

We're not just a global player. We serve on advisory boards in a number of industries, providing our expertise in the development of new standards. And having won numerous supplier of the year awards from some of the world's most respected companies, we take our role as partners seriously. We are champions for all matters concerning filtration.

ISO 16890
The new standard for classifying air filters

OUT WITH THE OLD. IN WITH THE NEW

EN 779 has been the most widely-used method of classifying air filters for over 20 years. But from the beginning of 2017, a new standard came into force that completely changed the way that filters are tested and categorized.

The good news is that ISO 16890 brings a number of benefits over the previous standard. It uses a number of new approaches and mechanisms that make the testing process more indicative of the conditions that the filter will operate within once installed. And the new rating system centers on the ultimate aim of an air filter—removing particulate matter—so it's easier to find a product that's matched to your needs.

WHAT'S WRONG WITH EN 779?

Since its launch in 1993, EN 779 has done much for the air filtration industry. Chief among which was introducing a uniform way to classify air filters that helped to drive up quality standards and simplify the process of selecting a filter. Unfortunately, it's this uniformity that is also EN 779 greatest weakness.

The air we breathe is a cocktail of countless types of particulate—of all shapes and sizes, and from all manner of sources. But EN 779 is based entirely on a filter's ability to capture one size of particulate—0.4 µm. It doesn't take into account all the different particle sizes that are present in outside air. And that's why the testing procedure has been criticized for not reflecting the conditions in which a filter will be expected to operate. The results from the lab are not indicative of the real world.

ISO 16890 is different. Under testing in the new standard, a filter is challenged with a variety of different sized particulate—just as it would be if it was installed in your air handling unit. And this particulate stretches from 0.3 µm all the way up to 10 µm in a series of 12 tests.

Testing to these different particle sizes needs all new equipment capable of splitting particulate into 12 channels dependent on its size. The latest test rigs do this with incredible accuracy—giving an even more detailed view of a filter's performance.

Four ISO filter groups. One aim — simplicity.

REPLACING THE OLD G TO F CLASS

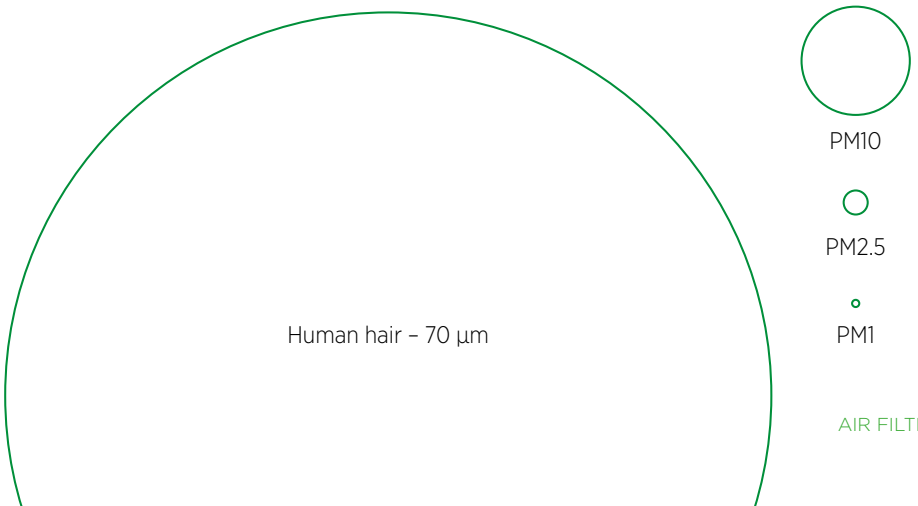
Four new filter groups are introduced under ISO 16890: Coarse, ePM10, ePM2.5 and ePM1. The 'e' prefix simply stands for efficiency. To fall into each category, a filter must be capable of capturing at least 50% of the particulate in that size range. Filters capturing less than 50% of PM10 dust go into the Coarse group.

ISO 16890 filter group efficiencies	
Coarse	< 50% of PM10
ePM10	≥ 50% of PM10
ePM2.5	≥ 50% of PM2.5
ePM1	≥ 50% of PM1

But not all products in a filter group will be the same. In product literature and test reports, the efficiency of the filter will be detailed alongside the group. So you are likely to see terms such as ePM2.5 60% or ePM1 95%. This simply means that the first filter provides 60% efficiency at PM2.5 and the second filter is 95% efficient at PM1.

The efficiency is rounded to the nearest 5%, so you should not come across any products listed as ePM10 89%, for example.

PARTICLE SIZE ILLUSTRATION



EN 1822
The test method for high efficiency air filters

ENSURING THE QUALITY OF EPA, HEPA AND ULPA FILTERS

The European filter testing standard is the most important basis for testing and classifying absolute filters. The standard is based on state-of-the-art particle measurement technology and authorized procedures for determining the efficiencies. It has five parts. The filter is assigned to the relevant filter class using the results from sections 4 (local arrestance) and 5 (integral arrestance).

An individual test report and serial number are produced for filters in classes H13 and higher. Therefore each filter from H13 on can be assigned to its own individual test. Individual testing of EPA filters is not necessary according to the standard, and is possible with the testing procedure described. EPA filters are tested in the course of sample testing, whereby the arrestance is obtained as a mean value from individual, random measurements.

PART 1: CLASSIFICATION, PERFORMANCE TEST AND IDENTIFICATION

EN 1822-1:2009 sets three groups:

- Group E: EPA – Efficient particulate air filter
- Group H: HEPA – High efficiency-particular air filter
- Group U: ULPA – Ultra low penetration air filter

The absolute filters are classified according to the local and integral arrestance values determined during testing.

PART 2: AEROSOL PRODUCTION, MEASURING EQUIPMENT, PARTICLE COUNTING STATISTICS

This part describes the conditions for testing and the aerosol generators, the particle measuring technology and the statistical procedures to evaluate the counts.

Filter Class	Integral Value		Local Value	
	Efficiency (%)	Penetration (%)	Efficiency (%)	Penetration (%)
E10	≥ 85	≤ 15		
E11	≥ 95	≤ 5		
E12	≥ 99.5	≤ 0.5		
H13	≥ 99.95	≤ 0.05	≥ 99.75	≤ 0.25
H14	≥ 99.995	≤ 0.005	≥ 99.975	≤ 0.025
U15	≥ 99.9995	≤ 0.0005	≥ 99.9975	≤ 0.0025
U16	≥ 99.99995	≤ 0.00005	≥ 99.99975	≤ 0.00025
U17	≥ 99.999995	≤ 0.000005	≥ 99.9999	≤ 0.0001

PART 3: TESTING FLAT SHEET FILTER MEDIA (DETERMINING MPPS)

Part 3 describes the determination of the fractional efficiency and determination of the most penetrating particle size (MPPS) of the flat sheet filter media.

A test aerosol is applied to the filter media at the nominal flow velocity specified for later use of the filter. Partial flows of the test aerosol are taken upstream and downstream of the filter sample. The particle counting method determines the particulate concentrations and calculates the fractional efficiency curve. The particle size at which the fractional efficiency curve reaches its minimum is call the MPPS. Put in simple terms, this is the particle size at which the filter medium works worst for a defined flow velocity.

PART 4: LEAK TESTING OF FILTER ELEMENTS (SCAN METHOD)

This section addresses how to test filters for leaks. Leaks can occur due to faults in the filter media, improper sealing between the pleat pack and frame or irregularities when handling the components. On account of the high filtration efficiency expected of absolute filters, even the smallest leaks (that are hardly visible to the human eye) can produce increased local particle concentrations.

For the automated process (scan test), the filter element is set up in a test rig and a DEHS (Di-2-Ethylhexyl-Sebacat) test aerosol is then applied. The mean particle size of the aerosol must lie in the range of the MPPS. The flow side of the filter is approached using probes on computer-controlled linear axis. At each point on the clean air side, the local aerosol concentrations are measured to determine the local degree of penetration. If the aerosol concentration does not exceed the required limit at any of the points, the filter is deemed to be leak free.

The necessity to determine the local efficiencies also implies the necessity for individual testing of each filter element upwards of filter class H13.

PART 5: DETERMINING THE EFFICIENCY OF FILTER ELEMENTS

Part 5 describes the determination of the integral filter efficiency. This value is usually calculated as the mean of the local individual efficiencies measured in Part 4. Alternatively, an individual measurement with fixed sampling probes is also permissible.

LEAK TEST ALTERNATIVE: OIL THREAD TEST (H13 AND H14)

In this fast, low-cost leak-testing method, the filter is positioned in front of a black background in a brightly lit room, horizontally and leak-free on a diffuser. An oil-drop aerosol (liquid paraffin) is then applied to the filter. Then, the filter is inspected visually for leaks. The test procedure depends highly on the training and attitude of the test personnel. Therefore the results cannot be exactly reproduced in repeated tests. Furthermore, the oil thread test does not determine the filter efficiency.

Finding your way Product names that make life easier

Many product names make sense to the people who use them every day—the filter manufacturers, but not to the people who matter—the customers. So, with the launch of the new ISO 16890 standard, we have taken the opportunity to overhaul our entire filter range to make it easier for you to find what you need.

Our products are named according to what they look like and what they do.

We have split products into categories and named each one according to what they look like. So you can instantly recognize what each product is, and quickly find what you need.

Each of these product families is then separated into three levels—Select, Eco and Pro—that follow a good, better, best format. So, if you're looking to minimize your initial expenditure choose a Select filter. If you need a product with a low energy consumption, choose Eco. And if you want a product that combines high standards of air quality with low energy consumption, you choose Pro.

Select

Entry-level product, with a focus on price/performance.

Eco

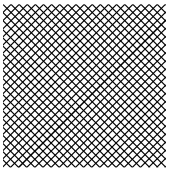
Mid-range product that provides improved life cycle costs.

Pro

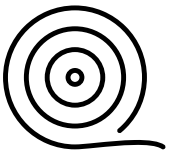
Flagship product or filter for a special application.

Of course, not all products fit into these three tight groups. So, special products have a descriptive name to indicate what makes them different; such as 'Refill' for our rechargeable filter product, NoGlass for our glass-free media products, and H2O for our water coalescing products.

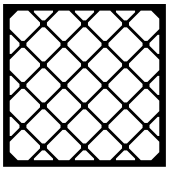
The high efficiency—EPA, HEPA and ULPA filters—and activated carbon products that are not affected by ISO 16890 make up new nanoclass and carboactiv product families respectively. These are then divided and named according to their shape too.



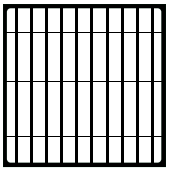
AIRMAT
Filter media cut into a mat.



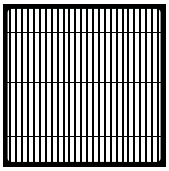
AIRROLL
Filter media wound into a roll.



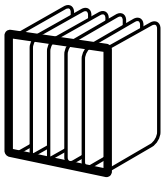
AIRPAD
A pad of filter media in a cardboard frame.



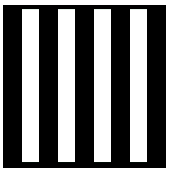
AIRPANEL
A pleated media in a plastic frame.



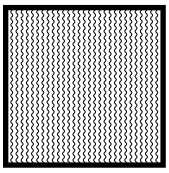
AIRSQUARE
A mini-pleated media in a plastic or metal frame.



AIRPOCKET
A pocket (or bag) filter with a plastic of metal frame.

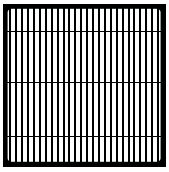


AIRCUBE
A compact filter, also known as a rigid bag.

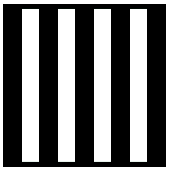


AIRCUBE DEEPPLEAT
A box-shaped filter with aluminum separators.

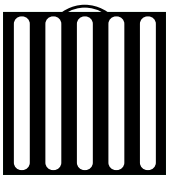
AIRTUBE
A cylindrical filter with a round pleated media.



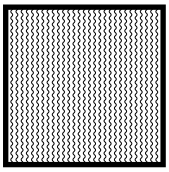
NANOCLASS SQUARE
EPA, HEPA and ULPA filter with a mini-pleated media.



NANOCLASS CUBE
EPA, HEPA and ULPA filter with a rigid, compact frame.

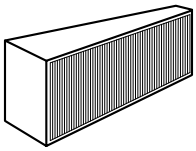


NANOCLASS CUBE N
EPA, HEPA and ULPA filter with mini-pleated media panels.



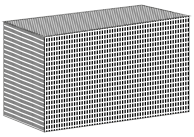
NANOCLASS DEEPPLEAT
High-capacity EPA, HEPA and ULPA filter.

NANOCLASS TUBE
A cylindrical EPA, HEPA and ULPA filter.

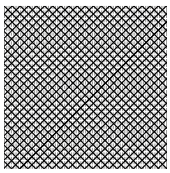


NANOCLASS WEDGE
A tapered EPA, HEPA and ULPA filter.

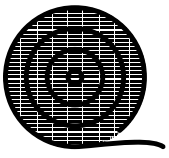
CARBOACTIV FILL
Loose activated carbon for use in refillable gas adsorption filters.



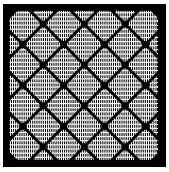
CARBOACTIV BISCUIT
Activated carbon formed into a cube block.



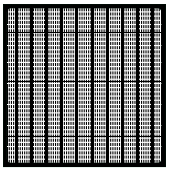
CARBOACTIV MAT
Activated carbon filter media cut into a mat.



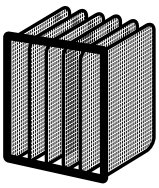
CARBOACTIV ROLL
A roll of activated carbon filter media.



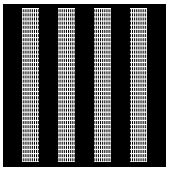
CARBOACTIV PAD
A pad of activated carbon media in a cardboard frame.



CARBOACTIV PANEL
Pleated activated carbon media in a plastic frame.



CARBOACTIV POCKET
Pocket (or bag) filter impregnated with activated carbon.



CARBOACTIV CUBE
Activated carbon filter with a rigid, box-shaped frame.

CARBOACTIV TUBE
Cylindrical activated carbon filter.

Typical Contaminants

Filter Class, Typical Contaminants and Applications

Group	Class	Typical Contaminants	Typical Applications
Coarse ISO 16890	50%	Leaves, insects, textile fibers	Low grade applications (e.g. For protection against insects and leaves)
	60%	Human hair, sand, water droplets	Low grade applications (e.g. for protection against sand and water droplets)
	70%	Beach sand, plant spores	Compact room air conditioners
	80%	Pollen, fog	Compact room air conditioners, prefilter for ePM2.5 and ePM1 filters
ePM10 ISO 16890	50%	Spores, sedimenting particles, cement	Inlet filter for very low requirement rooms, prefilter for ePM2.5 and ePM1 filters
	70%	Larger bacteria & germs, PM10 dust	Inlet filter for low requirements rooms, prefilter for ePM1 and E10 filters
ePM2.5 ISO 16890	50%	Soot, lung damaging dust (PM2.5)	Inlet filter for low requirements rooms, prefilter for ePM1 and E10 filters
ePM1 ISO 16890	60%	PM1 dust, cement dust (fine fraction)	Recirculated air in AC plants, prefilter for E11 and E12 filters
	85%	Oil smoke, bacteria	Prefilter for H13 and H14 filters and gas adsorption filters
E EPA Filters EN 1822	E10	Germs, tobacco smoke	Final filter for air-conditioned rooms of very high standard (e.g. hospitals)
	E11	Viruses on carrier particles, carbon black	Final filter for cleanrooms ISO class 7 – 8
	E12	Oil fumes, sea salt nuclei	Final filter for cleanrooms ISO class 5 – 6
H HEPA Filters EN 1822	H13	Radioactive particles	Final filter for ISO class 5 - 6 cleanrooms, military shelters and food, electronics & pharma industries. Exhaust filter in nuclear applications.
	H14	Viruses	Final filter for cleanrooms ISO class 4 – 5
U ULPA Filters EN 1822	U15	All air suspended particulate matter	Final filter for cleanrooms ISO class 3 – 4
	U16	All air suspended particulate matter	Final filter for cleanrooms ISO class 2 – 3
	U17	All air suspended particulate matter	Final filter for cleanrooms ISO class 1
A Gas Filters	Physisorption	VOCs, solvent vapors, kitchen odors	Airports, office buildings, hotels, hospitals, improvement of IAQ
	Gas Filters	Acidic Gases, SO_2, SO_4, NO_2, NOx	Computer and control rooms, microelectronics, museums, libraries
	Chemisorption	Amines, NH_3, NH_4, NMP, HMDS	Recirculated air in microelectronics industry

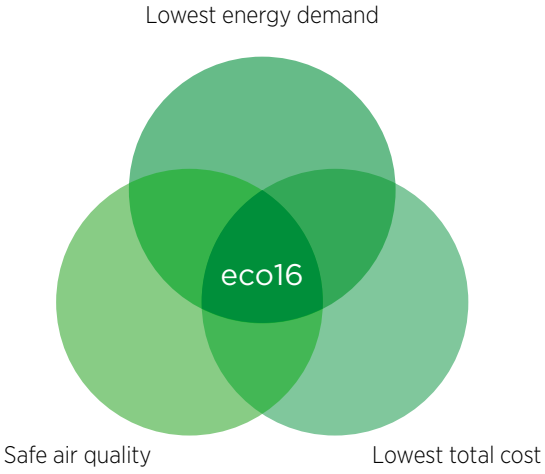
eco16
Clean air at the lowest possible cost

Just selecting a filter with the lowest energy consumption could risk the health of the people in your building. But over specifying filtration efficiency may mean your energy consumption is considerably higher than it needs to be.

There is a conundrum when it comes to HVAC filters: as filtration efficiency increases, so too does energy consumption. So choosing a filter that delivers high standards of air quality typically means you use more energy, which is not good for your budget or your carbon footprint.

Our patented eco16 program provides the answer to overcome this challenge. It finds the sweet spot where the filtration system is supplying a safe level of air quality but at the lowest possible energy demand.

We conduct a full analysis of your location, including measuring the air quality inside and outside your building. And on the basis of that data we configure the ideal filtration solution to meet your individual requirements. This configuration will provide you with a safe level of air quality at the lowest possible cost – to you and the environment.



Contact us or visit airfiltration.mann-hummel.com to learn more about eco16 Clean Air Management.

Prefilters

Used to separate: Coarse dust like insects, textile fibers, hair, sand, airborne ash, and pollen.

Prefilters are typically the first stage in a filter system and protect higher-quality, fine dust filters from becoming clogged or damaged by coarse dust.

Prefilters come in a variety of shapes and sizes; from rolls of filter media, which provide a cost effective first filter stage, to pleated panel filters that pack large filter areas into a compact frame.

Airroll Select Dust Glass

Product Range

Select

Features

Applications

Filter Class

G | Coarse

KEY FACTS

- Glass fiber filter medium
- To separate dry dust
- Free of silicon and paint-damaging substances
- Resistant to acetone

DESIGN

Continuously-spun glass fiber filter mats, which are impregnated with an antibacterial dust adhesive. Media features a progressive structure to provide even dirt loading.

APPLICATIONS

Separation of dry dusts in metal working plants, wood shops, etc.

Airroll Select Dust Glass

KEY FACTS

- Compatible with CEAG and AAF roll filter systems
- High dust holding capacity
- Wound for standard or reverse flow
- Odor free

DESIGN

Continuously-spun glass fiber media, tension wound onto a steel spool with end plates.

APPLICATIONS

Replacement filter roll for installation in CEAG and AAF systems.

Airroll Select
Glass Automatic RFM

Airroll Select Paint Dust

Product Range

Select

Features

Applications

KEY FACTS

- Glass fiber filter medium
- To separate paint mists
- Free of silicon and paint-damaging substances
- Resistant to acetone

DESIGN

Continuously-spun glass fiber filter mats with a progressive structure to provide even dirt loading.

APPLICATIONS

Floor filter for color mist separation in paint cabins and spray booth in the automobile industry, body paint shops, carpentry workshops, etc.

Airroll Select

Airroll
Paintcard PFF

Product Range

Features

Applications

KEY FACTS

- Self supporting, environmentally-friendly design
- Four to six times greater paint loading than glass fiber
- Simple method for retrofitting expensive water curtain systems
- Ensures an even air flow across the cabin

DESIGN

Self-supporting filter medium made from 100 % recycled cardboard. Paper pleats for effective paint storage.

APPLICATIONS

Prefilter for exhaust air in spray and paint cabins. Dry filter for cross-draft paint booths.

Airroll
Paintcard PFF

Filter Class

G | M

Coarse | ePM10

KEY FACTS

- High performance synthetic fibers
- High dust holding capacity
- Progressive density
- Robust and durable
- Available in a wide variety of sizes
- Mechanically and thermally bonded

DESIGN

Synthetic fibers in a progressively-structured filter mat that gradually increases in density with the depth of the material.

APPLICATIONS

For coarse and fine filtration of exhaust and supply air.

KEY FACTS

- Contains no irritants
- Zero risk of shedding
- Last up to four times longer than equivalent glass media
- Suitable for heavy-duty use
- High dust and paint holding capacity

DESIGN

Constructed from robust, flexible, polyester fibers connected by strong bonds, with no risk of shedding.

APPLICATIONS

Designed for paint booth and other wet/dry applications.

Airroll Pro

Applications

Filter Class

G | Coarse

KEY FACTS

- Compact design for simple storage, installation, handling and removal
- Available in a wide range of sizes
- Heavy duty, moisture-resistant design

DESIGN

Glass fiber media in a heavy duty, moisture-resistant chipboard case, which is creased prior to folding to eliminate moisture ingress.

APPLICATIONS

Prefiltration in general HVAC systems to protect plant room equipment and duct linings, and to extend the life of higher cost secondary filters.

Airpad Select Glass

SPECIFICATION

Recommended air flow	Flow rate ± 25 %	**Rec. final pressure for efficient energy use acc. to EN 13053**	Lowest value of initial pressure drop + 50 Pa, or initial pressure drop x 3
Heat resistance	Max. 70 °C	**Moisture resistance**	100 % rel. humidity / 90 % cardboard frame
Regenerable	No	**Incinerable**	Yes, except for metal frames

OPTIONS

Frame	Moisture-resistant cardboard or metal

Airpanel Select XL
Synthetic pleated filter

Product Range

Select

Features

XL

Applications

Filter Class

Coarse

KEY FACTS

- Compact design
- Increased surface area for high dust holding capacity and low pressure drop
- Specially finished support grid prevents oxidization
- Simple installation and handling

DESIGN

Pleated, synthetic filter media laminated onto an expanded diamond grid, which features a special finish to prevent oxidization.

APPLICATIONS

Prefiltration for air conditioning and ventilation equipment and/or systems. Highly effective with coarse dust.

Airpanel Select XL
Synthetic pleated filter

Airpanel Pro
Long-life pleated filter

Product Range

Pro

Applications

Filter Class

M Coarse

KEY FACTS

- Large filter area
- Long service life and high dust holding capacity
- No dust break through
- Flexible pleat distance holders allow a uniform air flow across the filter surface

DESIGN

Pleated media in a plastic frame with spacers to ensure the stability of pleats.

APPLICATIONS

Prefiltration or main filtration for all HVAC systems.

Airpanel Pro
Long-life pleated filter

Airpocket Select
Synthetic bag filter

Product Range

Select

Applications

Filter Class

G M

Coarse

KEY FACTS

- Synthetic filter medium
- Air flows up to 4,250 m^3/h
- High dust holding capacity
- High efficiency
- Easy installation and handling

DESIGN

Progressively-structured, polyester media conically-welded into single pockets. Robust and rigid metal or plastic frame.

APPLICATIONS

Prefiltration or main filtration for air conditioning and ventilation systems. Highly effective for coarse dust.

Airpocket Select
Synthetic bag filter

Fine Dust Filters

Used to separate: PM1, PM2.5, soot, cement dust, spores and larger bacteria.

Fine dust filters serve either as final filters for HVAC and similar applications, or as prefilters for EPA, HEPA or ULPA filters in ultra-clean environments.

Fine dust filters typically feature either a mini-pleated media in a variety of frame styles, or are formed into pockets in a bag filter.

Packing more into each millimeter. Airpocket Eco's wave media provides a greater filter area and allows dirt to be depth loaded within the media.

Airpanel Eco
Synthetic pleated filter

Product Range

Eco

Applications

Filter Class

M ePM10

KEY FACTS

- High efficiency panel
- Robust to reduce the risk of damage during installation
- Space-saving low depth

DESIGN

Electrostatically-charged synthetic media pleated with a robust wire backing.

APPLICATIONS

Suitable for use in close control air conditioning units, such as computer rooms and installations requiring a high degree of cleanliness.

EUROVENT CERTIFIED PERFORMANCE www.eurovent-certification.com

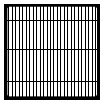
Airsquare Select
Mini-pleated filter

Product Range



Select

Applications

Filter Class

M	F
ePM10	ePM1

KEY FACTS

- Large filter area with low installation depth
- Stable compact design
- Lightweight

DESIGN

Mini-pleated, microglass media in a robust plastic frame. Hotmelt separators ensure an even air flow across the filter area and the hollow profile frame minimizes weight.

APPLICATIONS

Ideal for use as pre or main filtration in HVAC systems where space is limited.

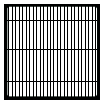
Grid	Plastic grid, one or two-sided

Airsquare Select Flange

Product Range



Select

Applications

Filter Class

M | F | ePM10 | ePM2.5 | ePM1

KEY FACTS

- Microglass fiber paper – no fiber loss or shedding
- Minipleats provide a large filter area
- Lightweight for easy handling
- Fully incinerable for simple environmentally-friendly disposal

DESIGN

Mini-pleated, microglass media in a robust plastic frame. Hotmelt separators ensure an even air flow across the filter area and the hollow profile frame minimizes weight.

APPLICATIONS

Ideal for use in general air conditioning systems where space is restricted or a rigid filter construction is required to combat turbulence, variable flow rates or vibrations.

OPTIONS

Gasket	EPDM or polyurethane foam gasket
Header Depth	25 mm

Airsquare Pro Flange HT

Product Range

Pro

Features

Applications

Filter Class

M | F

ePM10 | ePM1

KEY FACTS

- Operating temperature up to 120°C
- Microglass fiber with no risk of shedding
- Large filter surface area for high dust holding capacity
- Extremely high burst pressure
- Compact installation depth of only 88 mm

DESIGN

Microglass fiber media, pleated with cotton thread separators and held in a rigid, galvanized steel frame.

APPLICATIONS

Ideal for use as a pre or final filter in applications that require a high degree of safety.

EUROVENT CERTIFIED PERFORMANCE
www.eurovent-certification.com

Airpocket Select Synthetic Bag Filter

Product Range

Select

Applications

Filter Class

M F ePM10 ePM1

KEY FACTS

- Synthetic, melt-blown media
- Excellent cost-benefit ratio
- Easy installation and handling

DESIGN

Bag filter with a metal or plastic frame. Individual pockets are constructed from a multilayered, polypropylene melt-blown media. Pockets are designed to inflate and remain separated from one another to allow even distribution of the air flow across the entire filter.

APPLICATIONS

Prefiltration or main filtration for air-conditioning and ventilation systems in a wide range of applications, such as hospitals, computer suites, offices and public buildings.

OPTIONS

Frame	Plastic or galvanized steel
Gasket	EPDM flat gasket
Header depth	25 mm or 20 mm

EUROVENT CERTIFIED PERFORMANCE www.eurovent-certification.com

Airpocket Eco
Long-life bag filter

Product Range

Eco

Applications

Filter Class

M	**F**
ePM10	**ePM1**

KEY FACTS

- Highest energy efficiency
- Maximum reliability
- Multi-layer structure with built-in prefilter for maximum life

DESIGN

Pocket filters built with metal or plastic frame. Single pockets made from a synthetic, wave-structured media are tailor sewn with conical spacer seams for an optimal V shape.

APPLICATIONS

Prefiltration or main filtration for air conditioning and ventilation systems.

OPTIONS

Frame	Plastic or galvanized steel
Gasket	EPDM flat gasket
Header depth	25 mm
Silicon free	Also available silicon free

- High efficiency
- Low pressure drop
- Stable construction and low weight.
- Top cost-benefit ratio

DESIGN

Compact filter with a four-V design made of special, high temperature resistant plastic for a lightweight, stable construction. In-built temperature monitor indicates periods of high temperature for greater filter safety and improved process control.

APPLICATIONS

Prefiltration or main filtration for demanding HVAC systems.

Features

Applications

Filter Class

M | F | ePM10 | ePM2.5 | ePM1

KEY FACTS

- Changeable filter system
- Simple filter-change process requiring no tools
- Lightweight for easy installation
- Incinerable
- Metal and silicon free
- Reduces waste and disposal costs

DESIGN

Replaceable filter cells made from microglass paper media with thermoplastic separators. Cells are held in place with a tongue and groove profile and sealed with a rubber gasket.

APPLICATIONS

Prefiltration or main filtration for all HVAC systems.

ePM1

KEY FACTS

- For high flow rates up to 4,000 m^3/h
- Compact design saves space
- Large active media area
  Rigid and robust
- Optional plastic frame is incinerable and lightweight

DESIGN

V-shaped pleated cells with hotmelt or special thread separators to ensure the even spacing of the pleats. Available in various casing materials. Integrated handle for ease of installation.

APPLICATIONS

Fine dust filters for terminal outlets in ventilation and clean room systems with high air quantities.

High Efficiency Filters

Used to separate: Tiny contaminants, such as germs, viruses, carbon black and radioactive particles.

EPA, HEPA and ULPA filters can remove up to 99.99999% of particles 0.4 µm in diameter. These high efficiency filters are used to protect people – in applications such as biotechnology and pharmaceutical research, or processes – in the fields such as nanotechnology and microelectronics.

High efficiency filters come in a number of shapes and sizes, from space-saving panels to high-capacity, deep-pleated filters.

Product Range

Select

Features

Applications

Filter Class

E H

KEY FACTS

- High efficiency
- Minipleat technology
- Various frame depths and types
- Low pressure drop
- Guaranteed leak free

DESIGN

Filter medium constructed from various grades of microglass fiber paper folded into a pack. The filter pack is sealed into a wooden, galvanized steel or stainless steel frame with a solid polyurethane sealant. Every filter is tested according to EN 1822:2009, and is supplied with a test report and three-part serialized product label.

APPLICATIONS

Final filter for clean rooms and clean workbenches. Used in the separation of viruses, bacteria, toxic dust and aerosols in hospitals, medical institutes, chemists, laboratories, pharmacies, food processing facilities, and the microelectronics industry.

Features

Applications

Filter Class

E | H | U

KEY FACTS

- High efficiency (H13 > 99.95 %, H14 > 99.995 % at MPPS)
- Available in filter classes E11 to U16
- Integral knife-edge for use with gel-seal grid ceiling systems
- Available in depth of 109 mm
- Minipleat technology for laminar flow
- Low pressure drop
- Guaranteed leak free

DESIGN

Filter medium constructed from various grades of microglass fiber paper folded into a pack. As standard, the pack is sealed into an anodized aluminum frame with integrated knife-edge.

APPLICATIONS

Final filter for clean rooms and clean workbenches that use gel-seal grid systems. For separation of viruses, bacteria, toxic dust and aerosols, in hospitals/medical institutes, chemists, laboratories, clean rooms, pharmacy, food processing industry, microelectronics.

Features

Applications

Filter Class

H

KEY FACTS

- High efficiency (H14 > 99.995 % at MPPS)
- Self-healing, fluid gel gasket
- Available in depths of 80 and 104 mm
- High tensile strength
- 100% boron free
- Minipleat technology for laminar flow
- Extremely low pressure drop
- Guaranteed leak free

DESIGN

e-PTFE membrane filter media folded into a pack and sealed into an anodized aluminum frame. A fluid gel gasket ensures a perfect seal between the filter assembly and its housing. Grid to front and rear faces.

APPLICATIONS

Final filter for clean rooms and clean workbenches. For separation of viruses, bacteria, toxic dust and aerosols, in hospitals/medical institutes, chemists, laboratories, clean rooms, pharmacy, food processing industry, microelectronics.

KEY FACTS

- Operating temperature up to 120°C
- Microglass fiber with no risk of shedding
- Large filter surface area for high dust holding capacity
- Extremely high burst pressure
- Compact installation depth of only 88 mm

DESIGN

Microglass fiber media, pleated with cotton thread separators and held in a rigid, galvanized steel frame.

APPLICATIONS

Ideal for use as a final filter in applications that require a high degree of safety.

Gas Adsorption Filters

Used to separate: Gases including volatile organic compounds, odors, and nitrous oxides.

Gas adsorption and chemisorption filters typically use a range of activated carbon, impregnated media, chemical catalysts and oxidizers to remove harmful gaseous pollutants from an air flow. In doing so, these filters eliminate smells, odors and toxic air pollution, prevent corrosion and protect valuable products, processes or artefacts. Gas phase filters also protect humans and animals from sick building syndrome – as documented by the World Health Organization.

MANN+HUMMEL's gas phase filter product range features a large variety of specialist physical and chemical activity options, and also standard, plug n' play formats – including combined particle and gas phase filters that fit in any standard HVAC housing.

If you have a high flow rate, non-standard application that requires a special gas phase filtration stage, please contact your local MANN+HUMMEL representative and we will be glad to help you.

Product Range

Features

Applications

KEY FACTS

- Pelletized gas phase filtration media
- Various options designed to target specific contaminants
- Effective adsorption and chemical conversion of gaseous molecular air contaminants, solvents, chemicals and biological odors
- Ideal for use in refillable deep-bed gas adsorption and chemisorption installations

DESIGN

Gas-phase filtration media formed into pellets.

APPLICATIONS

Suitable for use in HVAC systems and industrial process exhaust treatment units (deep bed scrubbers) to solve a wide range of issues relating to molecular contamination. Each standard product has been specifically designed to address issues (e.g. toxic fumes, air pollution, odors, corrosion) caused by individual contaminents.

Carboactiv Tube
Activated carbon cylinder

Product Range

Features

Applications

KEY FACTS

- Extremely high capacity
- Removes odours and captures harmful gases
- Refillable (metal versions only)
- Simple "plug-and-play" installation system

DESIGN

Galvanized steel, stainless steel and plastic cartridges, which can be filled with a wide variety of activated carbon and mediums.

APPLICATIONS

Suitable for installation in HVAC and industrial process systems to solve a wide range of molecular contamination issues. Each standard products has been designed to target issues caused by specific contaminents.

Carboactiv Tube
Activated carbon cylinder

Carboactiv Pocket Duosorb Select

Product Range

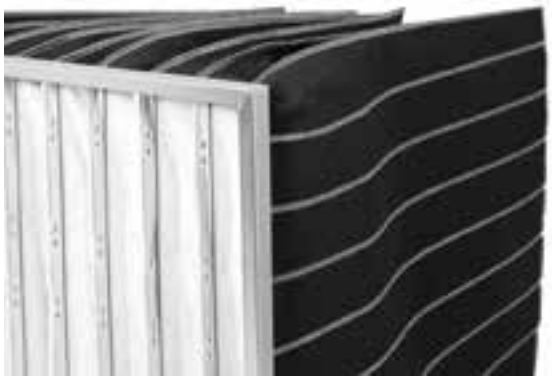
Select

Features

Applications

Filter Class

F | ePM1



KEY FACTS

- Particle filtration and gas adsorption in one filter element
- Improvement of indoor air quality
- Ideal for eliminating odors
- Low pressure drop

DESIGN

Multi-layered media, tailored-sewn into pockets with sealed, conical spacer seams for an optimal V-shape. A galvanized steel frame provides rigidity.

APPLICATIONS

For use in public buildings or other places where people gather to improve indoor air quality and protect against sick building syndrome.

Carboactiv Pocket Duosorb Select

Carboactiv Cube N

Product Range

Features

Applications

KEY FACTS

- Compact filter with airborne molecular contamination (AMC) filtration media
- Removes odours, solvents, condensables, airborne chemicals, molecular acids and captures harmful gases
- Rugged contruction and build provides high structural stability
- No exhaust-carbon dust load, minimizes the need for an additional safety, post-AMC fine filter
- Microgranulated carbon and impregnated media delivers high spontaneity of adsorption/reaction

DESIGN

V-shaped, pleated activated carbon cells, made of composite material of fine-grain absorbents embeeded into a synthetic textile matrix. Available in various casing materials. Integrated handle for ease of installation.

APPLICATIONS

For installation in HVAC systems to solve a wide range of issues relating to gaseous molecular contamination. Each standard product has been specifically designed to address issues (e.g. toxic fumes, air pollution, odors, corrosion) caused by specific contaminents.

Carboactiv Cube N

Carboactiv Cube
4V compact filter

Product Range

Features

Applications

Filter Class

ePM1

KEY FACTS

- Compact filter with molecular-filtration media
- Removes odors and captures harmful gases
- High structural stability
- Stackable frame system to reduce space
- Microgranulated carbon for high spontaneity of adsorption/reaction

DESIGN

Filter elements sealed into a 4-V plastic frame with polyurethane for an extremely robust construction. Pleat packs consist of carbon and chemical absorbants sealed into a synthetic media.

APPLICATIONS

Suitable for installation in HVAC systems to solve a wide range of molecular contamination issues. Each standard product has been designed to target issues caused by specific contaminants.

Carboactiv Cube
4V compact filter

Features

Applications

Filter Class

ePM2.5

KEY FACTS

- Particle filtration and gas adsorption in one filter element
- Top cost-benefit ratio
- Low pressure drop
- Stable construction
- Lightweight

DESIGN

Filter elements are sealed into a 4V plastic frame with polyurethane for an extremely robust construction. The pleat packs are made of a composite material based on fine-grain absorbents embedded into a synthetic textile matrix. The frame features an integrated handle for ease of transportation.

APPLICATIONS

Improvement of indoor air quality, particularly in locations with problem odors or gaseous compounds.

Carboactiv Cube Duosorb

Carboactiv Coupon Corrosion Coupons

Features

Applications

KEY FACTS

- Copper and silver-based coupons
- Identify and measure sources of corrosion on electrical and electronic components according to ISA71.04
- Provide exact measurement of gaseous components and molecular air contaminants, solvents, chemicals and biological odors
- Help protect expensive equipment from corrosion, and reduce associated downtime and outages

DESIGN

Copper and silver-based corrosion coupons, constructed to meet the requirements of ISA71.04 / ASHRAE TC9.

APPLICATIONS

Suitable for use in HVAC systems and industrial process exhaust treatment units to help tackle a wide range of issues caused by gaseous molecular contamination. Carboactiv Coupon identifies and measures corrosive contaminants in an internal environment, so that the filtration system or other corrective steps can be targeted at those specific contaminants and sources e.g. toxic and corrosive fumes, agriculture, air pollution, traffic, ambient heating and other polluting processes.

Power Generation Filters

Used to separate: All types of contaminants, including sea salt, water, dust, sand and fine particles.

Power generation air filters protect equipment like gas turbines from airborne contaminants that can cause fouling or damage. With clean intake air, turbine performance is improved and downtime for cleaning or repair is significantly reduced.

KEY FACTS

- Combined air filter and water coalescer
- Ideally suited to coastal applications
- High dust holding capacity of 3000 g/m² (SAE)

DESIGN

Disposable media of continuous glass fibers with progressive density coated with adhesive. The downstream side of the media is colored green to ensure correct installation.

APPLICATIONS

For use in industrial applications with rotating machinery like engines, gas turbines and smooth-flow compressors. Suitable for both land-based and offshore applications.

Airmat Eco H2O Power

KEY FACTS

- Combined prefilter with high efficiency coalescer in one stage
- Patented, highly efficient water drainage system
- High burst resistance up to 2000 Pa

DESIGN

Made from a durable plastic frame and a pleated pack of hydrophobic, progressively structured media. The pleats are stabilized with hotmelt support beads and plastic combs, and fixed into the frame using polyurethane.

APPLICATIONS

Particularly suited for use with rotating equipment located near to the sea, or where fog or rain is a regular part of the weather pattern.

Filter Class

F | ePM1

KEY FACTS

- Industry-leading burst resistance
- Fits all commonly used filter frames
- Fully incinerable
- Recyclable materials for simple, environmentally-friendly disposal
- High efficiencies at low pressure drops

DESIGN

Pleated cells with special thread separators to ensure the even spacing of the pleats. Robust, fully incinerable, hollow-profile plastic frame, made from recyclable materials.

APPLICATIONS

Primary filtration for gas turbine air intakes.

Airtube/Aircone Pulse Power Select

Product Range

Select

Features

Applications

Filter Class

F | ePM1

KEY FACTS

- Pulse-cleaning cartridges
- F8 efficiency according to EN 779:2012
- 80/20 cellulose and synthetic blend media
- Suitable for dry, dusty environments
- Built to withstand high levels of dust loading
- Available in cylindrical or conical formats
- Cone and smaller cylinder can be joined together for extremely high dust concentrations and air flows
- Uniform pleat spacing for maximum life
- Corrosion-resistant end caps

DESIGN

Pleated media formed into conical or cylindrical packs, supported by inner and outer expanded-steel sleeves. Epoxy-coated upper flanges and bottom end caps protect against corrosion. Liners are seamed to eliminate the risk of oxidation associated with welding dots.

APPLICATIONS

For gas turbine intake filtration in areas with high levels of ambient dust.

ATEX-Compliant Filters

Used to separate: All types of contaminants in potentially explosive atmospheres.

Equipment used in potentially explosive environments must meet the requirements set out within the ATEX directives to mitigate the risk to workers and the wider environment. Air filters are a key part of this. But as well as creating an environment free from the risk of explosion, air filters must also deliver a safe environment free from contaminants too.

All products in the MANN+HUMMEL Pro ATEX range are designed specifically to be fully compliant with ATEX directive 2014/34/EU. Various designs and filter efficiencies are available, and all products are suitable for all ATEX zones in the atmospheres relevant to each filter type and efficiency.

ePM1	**ePM2.5**
ePM10	**Coarse**

KEY FACTS

- Filter series compliant wih the European directive ATEX 2014/34/EU
- Particle filtration and gas adsorption in one filter element
- Removes odors and harmful gases

DESIGN

Multi-layered media, tailored-sewn into pockets with sealed, conical spacer seams for an optimal V-shape. A galvanized steel frame provides rigidity.

APPLICATIONS

For special air conditioning and ventilation systems in food, chemical and pharmaceutical industries, where demanding requirements for explosive atmospheres need to be met.

EX

The filters used in the application areas are electrically conductive and comply with the European ATEX directive 2014/34/EU for products used in explosive atmospheres.

KEY FACTS

- Suitable for high flow rates up to 4,000 m^3/h
- Compact, space-saving design
- Large active media area
- Ideal for robust industrial applications
- High temperature stability up to 120 °C
- Filter series tested according to EN 13501-1:2010 as E d0

DESIGN

V-shaped pleated cells with special thread separators to ensure even spacing of the pleats. Metal casing with an integrated handle for ease of installation.

APPLICATIONS

Fine dust and HEPA filtration for process applications in HVAC and clean room systems with high air flow rates.

OPTIONS

Frame material	Stainless steel; galvanised steel
Gasket	EPDM flat gasket 1 or 2 sides; U-profile gasket 1 or 2 sides

EX

The filters used in the application areas are electrically conductive and comply with the European ATEX directive 2014/34/EU for products used in explosive atmospheres.

Aircube & Nanoclass Cube N Pro ATEX are certified according to EN 13501-1:2010 in flammability class E and droplet formation class d0.

- Resistant to acetone

DESIGN

Continuously-spun glass fiber filter mats with a progressive structure to provide even dirt loading.

APPLICATIONS

Floor filter for color mist separation in paint cabins and spray booth in the automobile industry, body paint shops, carpentry workshops, etc.

Airroll Select Paint Dust

PERFORMANCE DATA

Article No.	Average arrestance	Dimensions	Flow rate	Pressure Drop
	Paint mist (%)	mm	m/s	Pa
800121021957	90 – 95	750 x 20000 x 50	2.5	6 – 30
800121021958	93 – 97	750 x 20000 x 70	2.5	7 – 40
800121021959	98 – 99	750 x 20000 x 100	2.5	14 – 60

SPECIFICATION

Recommended air velocity	2.5 m/s	**Recommended final pressure drop**	80 Pa for 50 mm and 70 mm, 130 Pa for 100 mm
Heat resistance	Max. 180 °C	**Moisture resistance**	80 %
Regenerable	No	**Incinerable**	No

Airroll
Paintcard PFF

Product Range

Features

Applications

KEY FACTS

- Self supporting, environmentally-friendly design
- Four to six times greater paint loading than glass fiber
- Simple method for retrofitting expensive water-curtain systems
- Ensures an even air flow across the cabin

DESIGN

Self-supporting filter medium made from 100 % recycled cardboard. Paper pleats for effective paint storage.

APPLICATIONS

Prefilter for exhaust air in spray and paint cabins. Dry filter for cross-draft paint booths.

Airroll
Paintcard PFF

Applications

Filter Class

G | Coarse

KEY FACTS

- Contains no irritants
- Zero risk of shedding
- Last up to four times longer than equivalent glass media
- Suitable for heavy-duty use
- High dust and paint holding capacity

DESIGN

Constructed from robust, flexible, polyester fibers connected by strong bonds, with no risk of shedding.

APPLICATIONS

Designed for paint booth and other wet/dry applications.

Pro

Features

Applications

Filter Class

ePM1

KEY FACTS

- Operates in temperatures up to 500 °C
- Large filter area up to 10 m^2
- Compact dimensions
- Long service life
- Silicon free

DESIGN

Hot-dip galvanized steel frame with grills to front and rear faces. Pleat pack is separated by aluminum spacers and sealed in place using a microglass filter media. Glass rope gasket is applied to the rear of the header without the use of glues or chemicals for extremely high temperature resistance.

APPLICATIONS

For industrial environments with both high temperatures and high flow rates, such as paint-finishing applications in the automobile industry.

FreciousComfort Filters

Used to: Improve indoor air quality and reduce allergic reactions in public and commercial spaces.

FreciousComfort technology allows allergy sufferers to breathe easy. Thanks to anti-allergenic and anti-microbial functions, FresciousComfort filters block free allergens and inhibit the growth of mold and bacteria.

FreciousComfort filters are available in pocket (bag) and compact forms, with a special Carboactiv version removing odors and harmful gases too.

Applications

Filter Class

ePM1

KEY FACTS

- Anti-allergenic coating inactivates free allergens
- Anti-microbial treatment prevents bacteria and molds on the clean air side
- Particle filtration via synthetic, meltblown filter media
- High dust holding capcity

DESIGN

Pocket filters built with metal or plastic frame. Single pocket made from multilayer, polypropylene meltblown media with integrated prefilter layer and conical spacer seams for an optimal V shape.

APPLICATION

Improvement of indoor air quality and reduction of allergic reactions in public buildings or other places where people gather.

Product Range

Features

Applications

Filter Class

ePM1

KEY FACTS

- Anti-allergenic coating inactivates free allergens
- Anti-microbial treatment prevents bacteria and molds on clean air side
- Particle filtration and gas adsorption in one layer
- Removes odors and captures harmful gases
- Certified quality (bifa, Hohenstein Institute)

DESIGN

Filter elements are sealed into a 4V plastic frame with polyurethane for an extremely robust construction. The pleat packs are built up of three layers featuring particulate matter filtration, activated carbon and the FreciousComfort with the biofunctional layer. The frame features an integrated handle for ease of transportation.

APPLICATION

Improvement of indoor air quality and reduction of allergic reactions in public buildings or other places where people gather.

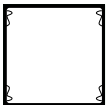
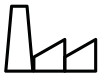
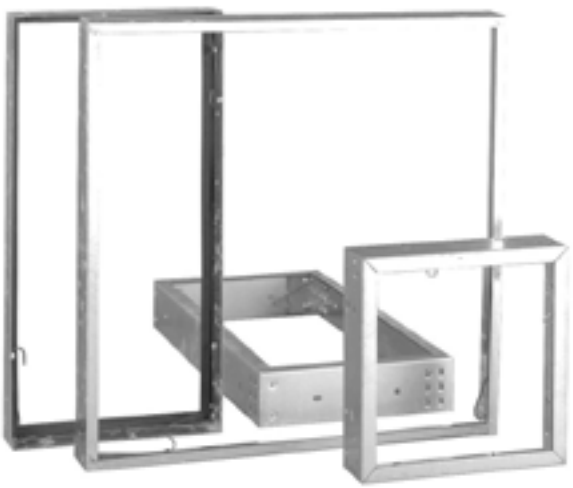
Airhandling
Mounting frames

Product Range



Applications





KEY FACTS

- Quick and easy filter replacement
- Compatible with a wide range of air filters
- Stable, compact design
- Non-standard sizes to fit any aperture also available

DESIGN

Front, rear and side withdrawal frames manufactured from galvanized or stainless steel.

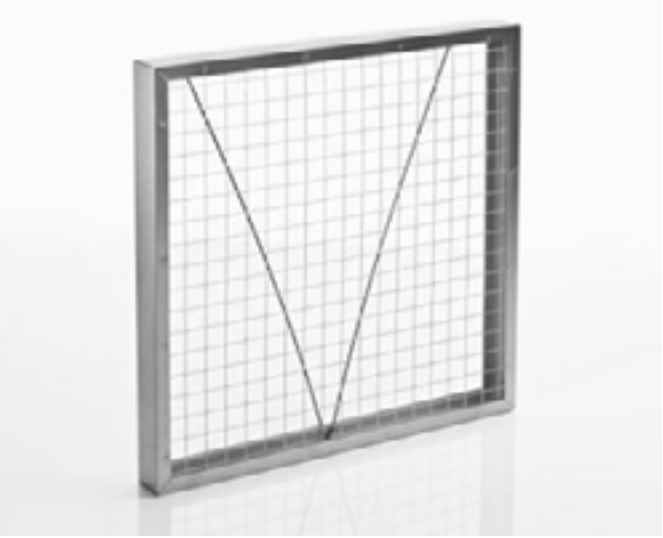
APPLICATIONS

Mounting frames for the installation of air filters.

Airhandling
Mounting frames

PAD-HOLDING FRAMES

This type of frame can be fitted with the AIRMAT GLASS or AIRMAT NO GLASS. The frame is supplied with a mesh grill downstream to support the material and can be supplied with a clip on the front to retain the media in the frame.



FRONT-WITHDRAWAL FRAMES

Standard sizes available are 610 x 610, 610 x 508 and 610 x 305 mm in the depths 75, 100, 120, 170 and 320 mm. Other sizes can be made to order. These frames can be used with the complete MANN+HUMMEL air filtration range.

The frames are supplied with a gasket fitted to eliminate air bypass.

Other mounting frames available upon request.

Industrial Air Cleaners

Used to separate: Oil smoke and oil mist emissions generated by industrial processes.

ScandMist is a range of industrial air cleaners that use a modular filter system to eliminate oil smoke, oil mist and emulsion mists for a clean and safe workshop environment. ScandMist removes fumes, emissions and other harmful by-products of metalworking processes at source with a three-stage filtration process. The clean air is returned directly to the workshop and exceeds international health and safety standards for exposure limits to metalworking fluids – including OSHA, NIOSH and HSE

	PAGE	ISO Coarse	ISO ePM10	ISO ePM2.5	ISO ePM1	EPA	HEPA	ULPA	HVAC	Cleanroom	Power Gen	Industrial	ATEX-rated	Burst resistant	Gas adsorption	Glass fiber	Grease removal	High efficiency	High temp.	NoGlass media	Paint application	Pulse function	Re-gen	Water removal	XL capacity

ScandMist P Series	220						•					•			•	•									
ScandMist M Series	222						•					•				•									

Clinically clean. The output air from ScandMist units is so clean it can be exhausted directly into the workshop, where it's likely to be of a higher quality than that found outside the building.

ScandMist R Series

Applications

Filter Class

H

KEY FACTS

- Effective removal of oil smoke
- For air flows from 400 – 4000 m^3/h
- Final HEPA filter stage for clinically clean air
- Long filter life
- Versatile, modular system
- Energy efficient EC motor
- Harting connectors for simple electrical installation
- Remote power on/off
- Signal output for filter life analysis

DESIGN

A fan driven by an EC motor pulls the contaminated air through one or two coalescer stages, before a final high efficiency phase. Pressure manometers monitor the performance of each stage and an optional integrated pump returns the oil for reuse. The durable, metal housing is powder-coated inside and outside in RAL 9010.

APPLICATIONS

For the removal of oil smoke in industrial environments, such as turning, grinding, milling and other CNC applications.

SCANDMIST HIGH CAPACITY SYSTEMS

ScandMist high capacity platforms manage the oil mist and smoke emissions from a number of CNC machines, and are particularly popular in high-volume manufacturing environments that require filtration systems for entire production lines.

These high capacity systems are designed to operate as part of a local ventilation system and can handle air flows from 6,000 m³/h to over 100,000 m³/h.

ScandMist D Series

CONSULTANCY SERVICES

Effective industrial ventilation is crucial in the highly-regulated manufacturing sector. But it's a complicated topic, with different requirements depending on your process and geographical location.

To help you navigate this complexity, we provide a range of consultancy services focusing on industrial ventilation. We can come to your location and measure the efficiency of existing filtration systems. Once we have determined the air quality across your facility, we will design an oil mist system that's tailored to your requirements.

Please contact us for more information.

ScandMist P Series

Applications

Filter Class

H

KEY FACTS

- Effective removal of oil fumes and VOCs
- For air flows from 400 – 4000 m^3/h
- Final HEPA filter stage for clinically clean air
