

Filtration

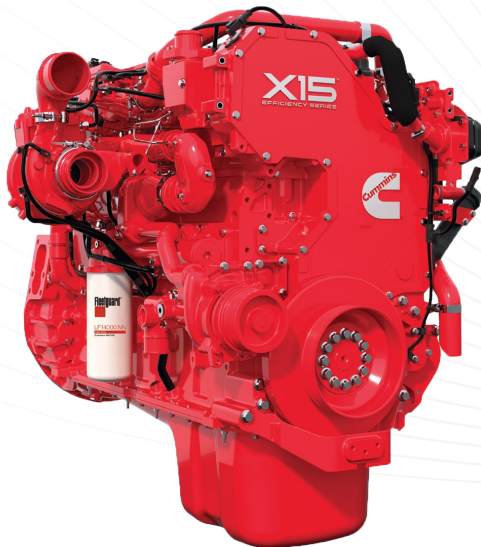

Corporate Brochure

The Cummins Advantage.

As a wholly owned business unit of Cummins Inc., Cummins Filtration provides a unique competitive advantage for our customers around the world. The dynamic synergy that exists among all Cummins global businesses ensures that our customers receive the most advanced technology, best sourcing and optimal delivery capabilities to meet their specific needs. From our local facilities on every continent, our team of dedicated employees and top quality suppliers are able to serve our customers more efficiently and effectively in their unique markets.

Through our Fleetguard® brand of filtration, coolant and chemical products, we cover the widest scope of engine applications on the market, including:

- On-highway Heavy/Medium Duty Truck
- On-highway Bus
- Open Pit and Underground Mining
- Marine
- Agriculture
- Construction/Light Construction
- Oil and Gas
- Light Duty Automotive
- Power Generation
- Industrial
- Locomotive
- Natural Gas

Committed to Customer Support Excellence.

We know you rely on Cummins Filtration after the sale as much as when you place an order. Our commitment is to meet your needs beyond the sale with world class service. We do this by creating processes that start with listening to the voice of our customers, implementing lean organization principles, and using Six Sigma tools for continuous improvement.

It is our privilege every day to troubleshoot your unique maintenance needs and provide support to protect your investment. Through all of our support services, we strive to make your business easier. Our approach to integrated system maintenance creates a one-stop shopping advantage that allows you to purchase all your filtration, coolant and fuel additive products with one single transaction.

Whenever you need us, our global Customer Centers are ready to provide outstanding service, including:

- **Personal assistance** in any time zone, in multiple languages
- Expert **technical advice** by phone, fax or online
- **Field site visits** by trained technical staff
- Customized **maintenance kits** with specified parts
- **Interactive web site** updated daily with new product and service information at cumminsfiltration.com
- **FleetMaster** email response within 24 hours
- Complete **online catalog** with interactive information support
- **Fleetguard Access™** order and shipment tracking, invoice and inventory inquiries
- Industry's Best **Warranty**
- FleetMaster **Catalog on CD** with Fleet Manager

The Fleetguard Advantage.

The advanced designs and high quality performance of Fleetguard heavy duty filters give customers the ultimate protection for their equipment. All Fleetguard products are engineered to meet or exceed OEM specifications and ensure engines and other systems get maximum life. Backed by the best warranty in the business, you can have total confidence in your purchase. With over 8,300 products, Cummins Filtration covers the widest range of air, lube, fuel and hydraulic filters in the heavy duty industry. More than a filter company, we are the only media manufacturer that is part of an engine company. This gives us the unique advantage of knowing engines from the ground up, and we use that knowledge to customize our media for specific products, that provide optimal performance and added value.

Proving it Every Day.

Using our extensive experience with diesel engines and systems, we are able to control the performance characteristics of everything we make, ensuring each of our products meet the demands and unique requirements of modern engines to help them run longer and stronger. Our products are backed by solid research and testing done not only in advanced laboratories but also in the field, where it really counts. You can rely on our real world rigorous testing standards that go far above and beyond the bare minimum met by most manufacturers.

Leverage the Advantage.

Pioneering Power.

Fuel Filtration.

Our comprehensive line of fuel filtration products with NanoNet® media offer optimum protection from contaminants like dirt and water, an engine's biggest enemy. With better fuel filtration, users can expect extended service intervals, allowing increased uptime and reduced operating costs, all adding directly to the bottom line.

Lube System.

Stringent environmental requirements forced changes in engine designs that have resulted in an increased level of soot and other contaminants. Along with combustion, engine wear, spent additives, etc., this issue has made lube filtration more challenging than ever before. With over five decades of experience and a history of innovation, you can depend on our lube system products to keep things running smoothly.

Friendlier Fuel.

Smoother Running Engines.

Air Intake Systems.

Intelligent design and rigorous testing ensure our state of the art air intake systems and components meet global OEM specifications for maximum quality and performance. With more than 3,000 parts and growing, our broad product line of air cleaners, air filter elements and accessories keep you ahead of the competition.

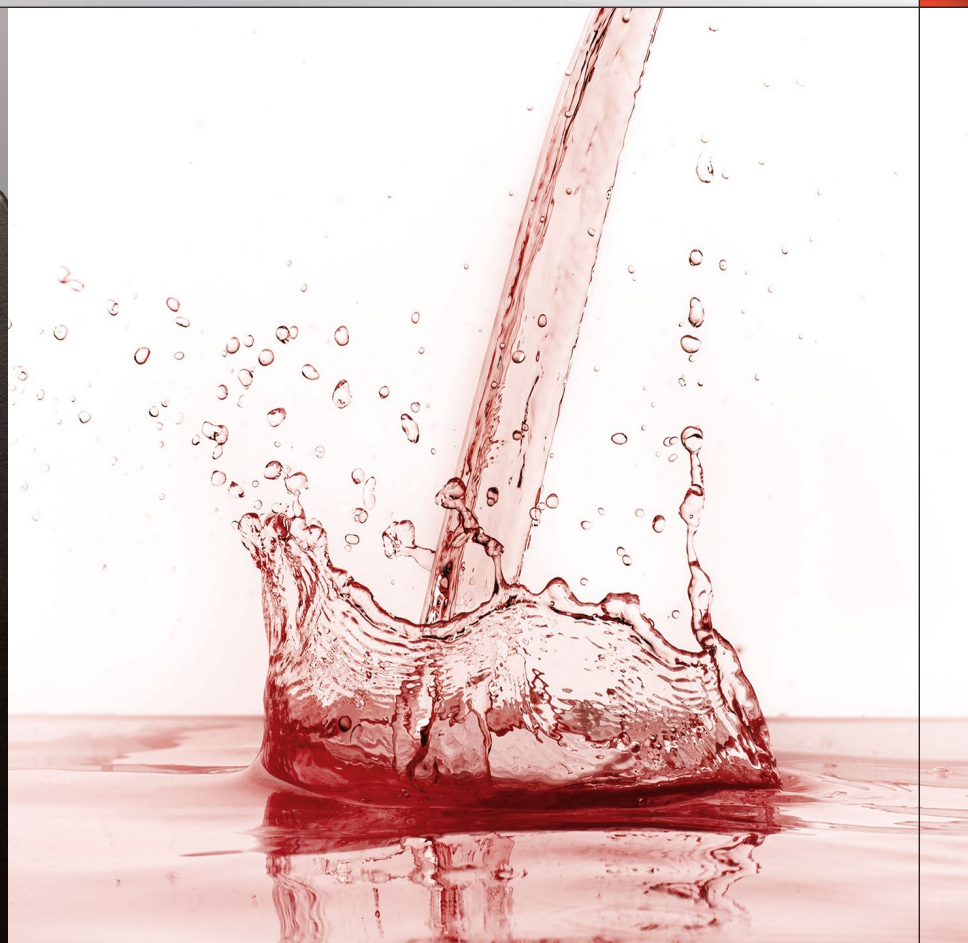

Coolants and Fuel Additives.

Studies show that over 40% of total engine repair costs are related to problems that originate in the cooling system. Our advanced line of field and laboratory tested products help avoid costly cooling system issues and ensure easy maintenance, offering you complete protection.

Optimum **Performance.**

Maximum **Protection.**

Crankcase Ventilation.

Cummins Filtration crankcase ventilation systems use patented technologies to control oil drip and crankcase emissions in diesel engine applications. Superior aerosol filtration and collection, elimination of oil drips, and elimination of engine compartment fumes is possible when using one of our ventilation systems and kits available for a wide range of applications.

Hydraulic Systems.

Through use of the precisely right choice of filter media, our products achieve efficiency and dust capacity with lower pressure drop characteristics than the competition. System performance, design flexibility and high quality are reflected in our diverse hydraulic filtration product family.

Emissions **Efficiency.**

Precision and **Prevention.**

Cummins Filtration Fleetschool.

As filtration technology constantly changes to keep pace with new engine technology, Fleetschool is your most dependable resource for updated product and market information related to the Fleetguard brand.

Our program features easy-to-use, self-guided training modules that cover a wide variety of modern filtration technology and product topics. With short tutorials, self assessments and online course monitoring, Fleetschool is an excellent tool for individuals to become certified Fleetguard users from the convenience of their unique location. By completing our training program, you will be a knowledgeable expert in the eyes of your customers.

This technical training and certification provides multiple advantages:

- Easy online completion accessed from any location
- Knowledge of the latest maintenance information
- Troubleshooting tips to protect an integrated engine system
- Partnership with customers to help reduce downtime and minimize operator hassles
- Increase your product knowledge
- Email updates on new courses as created

To access the training please visit www.fleetschool.com and self-register today!

Wherever You are, **We Are.**

Fleetguard products are available at over 33,000 retail locations worldwide. For the one nearest you, go to cumminsfiltration.com.

In North America, customers who want more information or have questions can call **1-800-22FILTER (1-800-223-4583)**.
