Technical Specifications

Micron Rating:	10 µm	Filter Housing Series:	BGT11C (FK1098)
Brand:	Parker	Filter Element Type:	10QL Ecoglass
Length:	390 mm	Product Type:	Hydraulic Filter Replacement Part
Division:	Hydraulic & Industrial Process Filtration Division EMEA	Seal Material:	Silicone
Technology:	Hydraulics, Filtration	Diameter:	120 mm

[Safety Warning](#)

Item Information

The high quality replacement elements of the BGT filter series are available in a wide variety of sizes and with several filter materials and micron ratings. These replacement elements ensure the quality of filtration Parker is known for.

Fluid passes through the elements in an inside-to-outside direction, collecting particles inside the filter cartridge. This eliminates reinjection of contaminant during element change. Clean fluid then returns to the reservoir.

The BGT series filters are available with Magnetic pre-filtration. The magnet column removes ferrous particles, even during times of bypass, and extends the life of the filter element.

Using genuine Parker replacement elements guarantees Parker's quality of filtration. Using after market filters with unknown media quality may save

initial cost, but can increase overall costs by requiring more element change outs and potentially causing system downtime. Protect your investment by always buying genuine Parker replacement elements.
