# **Medium Pressure Inline Filters CN Series**

Part #: 80CN210QEBM2KN244

The CN Series is a compact, cost effective, medium pressure filter designed with coreless filtration technology. CN Series bowl features a permanently fixed core designed to reduce solid waste and minimize disposal costs with every element change out.

## **Technical Specifications**

Flow Rate: 130 gpm (492 lpm)

Mounting Style: Inline Pressure Rating:

1000 psi (69 bar) Filter Element Type: 10Q Microglass Seal Material: Nitrile Port Connection Type: 1-1/2" NPT

Specifications Met: n/a Bypass Valve Pressure 50 psi (3.4 bar) Rating:

Options: Drain port Port Type: 1-1/2" NPT Maximum Operating Temperature: Weight:

Indicator Pressure Setting:

Indicator Type:

For Fluid Type:

Housing Material:

15.2 lbs (6.89 kg) Compatible Element: 936718Q Hydraulic Filter Product Style: Product Type: Hydraulic Filter

Visual automatic reset

Mineral, Petroleum and Polyalphaolefin (PAO)

Aluminum

50 psi (3.4 bar)

based fluids

225 F (107 C)

### Item Information

Compressor Lube Oil Off-line Filter Loops Machine Tools (Automotive Standard) Hydrostatic Drive Charge Pumps Mobile Equipment Pilot Lines for Servo Controls Oil Patch Drilling Equipment Injection Molding

This partial list of applications for Parker CN series filters has a common factor, the need for an economical, medium pressure range filter with excellent fatigue pressure ratings. Prior to the availability of the CN filter, applications such as those listed were restricted by limitations of a spinon can, or forced into the higher cost range of high pressure filters.

The CN series fills this gap, and now with the newly increased fatigue rating from 550 to 800 psi, the applications are expanded.

#### **Features**

- · 800 psi fatigue rating (eight times that of a spin-on)
- · Diametral (side) seal between head and bowl
- · Dust Seal
- · Cast aluminum head
- · Standard Microglass elements
- · Complete performance data disclosure
- · Visual, electrical or electrical/visual indicators available

#### Advantages

- · Ability to provide reliable service under tough cyclic operating conditions
- · Can be utilized in applications where high pressure filters may have been only option
- · Proven reliability in cyclic applications
- · Reduced importance of bowl torque
- · Prevents contamination from building up on bowl / head threads
- · Low profile, lightweight and durable
- · Multi-layered design produced high capacity and efficiency
- Reduces pleat bunching, keeps performance consistent
- · All pertinent information is provided in an easy-to-compare format
- · Check element condition at a glance
- · Right style for the application

#### **Benefits**

- · Reduced downtime due to premature filter failures
- · Reduced costs, better "fit" for the application
- · No downtime, no leaks
- · Performs with "real world" service
- · Easier service, no galling
- · Less weight, smaller envelop and cleaner appearance
- · Great performance value
- · Reliable performance throughout element life
- · Reduces downtime, maximizes element life
- · No hidden deficiencies
- · Easy selection of proper filtration
- · Optimize element life, prevent bypassing
- · Matches your system electrical connections
