Item Information

Items marked with an asterisk * in the drop-down menus are standard choices.

The 130 Series is a range of medium pressure filters and systems offering an economical 'multipurpose' filter solution.

130 series filters are offered with two types of element:

- The conventional element, making use of the Microglass media.
- The Ecoglass element, an environmentally friendly design without metal inner core. The Eco elements are used in versions of the 130 filter with an Eco inner core fixed inside the bowl of the filter. Having no metal content in the element reduces the overall weight with 50% and makes it possible to dispose of the used element in an environmentally friendly way by incineration, also lowering disposal costs.

Using genuine Parker replacement elements guarantees Parker's quality of filtration. Using after market filters with unknown media qua.

save initial cost, but can increase overall costs by requiring more element change outs and potentially causing system downtime. Protect your investment by always buying genuine Parker replacement elements.
