### Technical Specifications

Vessel Size:	Length 2	Seal Material:	Nitrile
Filter Element:	10QE Ecoglass *	Product Type:	Filter Element
Brand:	Parker	Product Series:	45M
Division:	Hydraulic & Industrial Process Filtration Division EMEA	Options:	Standard
Micron Rating:	10 µm	Filter Material:	Microglass III Ecoglass III
Industry:	Industrial Manufacturing Equipment Off-Road Machinery	For Fluid Type:	Mineral and vegetable oils and some synthetic oils
Application:	Hydraulic Filtration	Operating Pressure:	Up to 40 bar
Length:	200 mm	Operating Temperature:	-40 to +100 °C
Diameter:	78 mm	Maximum Pressure	10 bar when mounted on the ECO-core (ISO 2941)
Technology:	Filtration, Hydraulics	Differential:	
		Maximum Flow Rate:	260 L/min

### Item Information

Items marked with an asterisk \* in the drop-down menus are standard choices.

The 45M Series utilises a cast iron head and steel bowl design and can be specified with Microglass or Ecoglass filter media. Filter bowl is designed for rapid element replacement.

45M series filters can be offered with two types of element:

- The conventional element, making use of the Microglass media and in some sizes also available with ParGel Water Removal media.
- The Ecoglass element, an environmentally friendly design without metal content. This Eco element is fitted on a re-usable metal inner core. Having no metal content in the element reduces the overall weight with 50% and makes it possible to dispose of the used element in an environmentally friendly way by incineration, also lowering disposal costs.

Using genuine Parker replacement elements guarantees Parker's quality of filtration. Using after market filters with unknown media quality may save initial cost, but can increase overall costs by requiring more element change outs and potentially causing system downtime. Protect your investment by always buying genuine Parker replacement elements.
