Item Information

Items marked with an asterisk * in the drop-down menus are standard choices.

The ATZ Series is a compact and robust cast aluminium tank-wall mounted suction filter, located below tank oil level. This submersible suction line filter offers maximum protection for the hydraulic system pump. When removing the element, the check valve closes automatically, eliminating any chance of oil leakage.

ATZ replacement elements are available with a variety of high quality filter media packs and a choice in micron ratings typically used for suction filter applications.

Using genuine Parker replacement elements guarantees Parker's quality of filtration. Using after market filters with unknown media quality may save initial cost, but can increase overall costs by requiring more element change outs and potentially causing system downtime. Protect your investment by always buying genuine Parker replacement elements.
