### Technical Specifications

Filter Housing Series:	TTF4 (1-120)	Seal Material:	Nitrile
Filter Element:	250W wire mesh	Length:	199 mm
Micron Rating:	250 µm		

[Safety Warning](#)

### Item Information

The high quality replacement elements of the TTF filter series are available in a wide variety of sizes and with several filter materials and micron ratings.

These replacement elements ensure the quality of filtration Parker is known for.

Fluid passes through the elements in an inside-to-outside direction, collecting particles inside the filter cartridge. This eliminates reinjection of contaminant during element change. Clean fluid then returns to the reservoir.

The TTF series filters are available with Magnetic pre-filtration. The magnet column removes ferrous particles, even during times of bypass, and extends the life of the filter element.

Using genuine Parker replacement elements guarantees Parker's quality of filtration. Using aftermarket filters with unknown media quality may save initial cost, but can increase overall costs by requiring more element change outs and potentially causing system downtime. Protec\* investment by always buying genuine Parker replacement elements.
