Tanktop Mounted Return Line Filter - TTF Series

Part #: TTF910QBP2EG243

The TTF Series features pre-filtration by means of a magnet column and a quick response bypass with low hysteresis. Maximum pressure 10 bar. Maximum flow 500 l/min. A second return port is an available option as is a filling port in the filter cover.

Technical Specifications

Flow Rate: 0 to 500 l/min Brand: Parker

Hydraulic & Industrial Process Filtration Division Division:

EMEA

Bypass Valve Pressure 1.5 bar Rating: G11/2 Connection Type:

Industry: Trucks and Buses, Materials Handling, Construction

Filter Element Type: 10Q Microglass

Refuse Trucks, Mobile Cranes, Power Packs, Wheel Application:

Loaders, Drilling Equipment

Micron Rating:

Technology: Filtration, Hydraulics Hydraulic Oil Filters Product Type:

⚠ Safety Warning

Indicator Type: No indicator, port plugged L+R

Options: Diffuser type T **Product Series:** TTF Series

Product Style: Tanktop Mounted Return Line Filter

Seal Material: Nitrile Bypass Valve Pressure 1.5 bar

Rating:

Operating Pressure: 10 bar, 150 psi Operating Temperature: -40 to 100 °C Filter Element Type: 10Q Microglass Mounting Type: Tanktop Mounted Indicator Pressure

Setting:

No indicator

Parker TTF tank top mounted return line filters feature pre-filtration by means of a magnet column and a quick response bypass with low hysteresis. Thanks to the "In-to-Out" filter principle, contaminated oil cannot leak back into the system during element change.

TTF filters are available in formats capable of handling flow rates up to 500 l/min. They can operate up to a maximum working pressure of 10 bar. Options include a filling port in the filter cover, a second return port and customised diffusers can be specified.

Features and Benefits

- 10 bar rated filter can be utilised for severe return line applications for reduced downtime due to premature filter failures
- · Patented LEIF® elements safeguard filtration quality
- · Magnetic pre-filtration removes ferrous particles, even during bypass conditions for improved cleanliness levels and extended element life time
- · In-to-out filtration means captured contamination is retained inside the element preventing recontamination of the filter
- Quick response bypass with low hysteresis for improved system protection.
