Item Information

The Racor Hot Stick with integrated fuel sender and optional thermostat delivers warm fuel directly from the fuel tank for fast start-ups in cold weather and biodiesel applications. Innovative dual action heating radiates heat into the tank and heats the fuel again as it's drawn up through the standpipe producing optimum efficiency in extreme conditions.

The Racor Hot Stick integrated Fuel Sender is a ruggedly reliable, 100% solid state 12-volt sender. The Fuel Sender is designed to work in any petroleum based product. It eliminates the need to continuously replace mechanical senders.

Fits standard five-bolt SAE fuel sender holes.

For more information or a detailed discussion about your specific requirements please contact Parker or an authorised Parker distributor.
